Submodule 35.20: Forking aur Open Source Contribution (Hinglish)

1. Forking kya hoti hai?

Fork ka matlab hota hai kisi doosre developer ya organization ki GitHub repository ki ek complete copy apne khud ke personal GitHub account par bana lena.

Fork aur Clone ka Farak:

- **Clone**: GitHub se code ko apne computer ki hard drive par download karna.
- **Fork**: Kisi doosre ke GitHub account se repository ko apne GitHub account par copy karna.

---

2. Forking kyun karte hain?

1. **Push Access Na Hona**: Duniya bhar ke bade open source projects (jaise Python, PyTorch) par koi bhi direct code push nahi kar sakta. Isliye pehle fork karke apne account par laate

hain.

2. **Open Source Contribution**: Apne fork mein changes karke aap original creator ko Pull Request bhej sakte ho ki "Maine yeh bug fix kiya hai, aap apne code mein merge kar lo".

---

3. Open Source Contribution ke 6 Steps

1. **Fork Karein**: GitHub par repo par ja kar top-right mein **Fork** par click karein.
2. **Clone Karein**: Apne account wali forked repo ko computer par clone karein:

```
git clone https://github.com/aapka-username/repo.git
cd repo
```

3. **Nayi Branch Banayein**:

```
git checkout -b fix-bug
```

4. **Code Sudharein aur Commit Karein**:

```
git add .
git commit -m "Fix calculation bug in data preprocessor"
```

5. **Apne Fork par Push Karein**:

```
git push origin fix-bug
```

6. **Pull Request (PR) Bhejein**: Original repo par ja kar **Contribute / Open Pull Request** par click karein.
