Submodule 35.16: Branches ko Merge Karna aur Pull Requests (Hinglish)

1. Branch Merge kya hota hai?

Jab aapka feature ya bugfix branch mein complete ho jata hai, toh uske code ko wapas primary `main` branch mein jodna **Merge** kehlata hai.

---

2. Local System par Merge Karna

Maan lo aapne `feature-button` branch mein `app.js` banayi:

1. Pehle `main` branch mein wapas aao:

```
git checkout main
```

2. Feature branch ko merge karo:

```
git merge feature-button
```

3. Purani branch delete kar do:

```
git branch -d feature-button
```

---

3. Industry Standard: GitHub Pull Request (PR)

Company mein developers direct main branch mein merge nahi karte. **Pull Request (PR)** open karte hain:

1. **Branch Push Karein**:

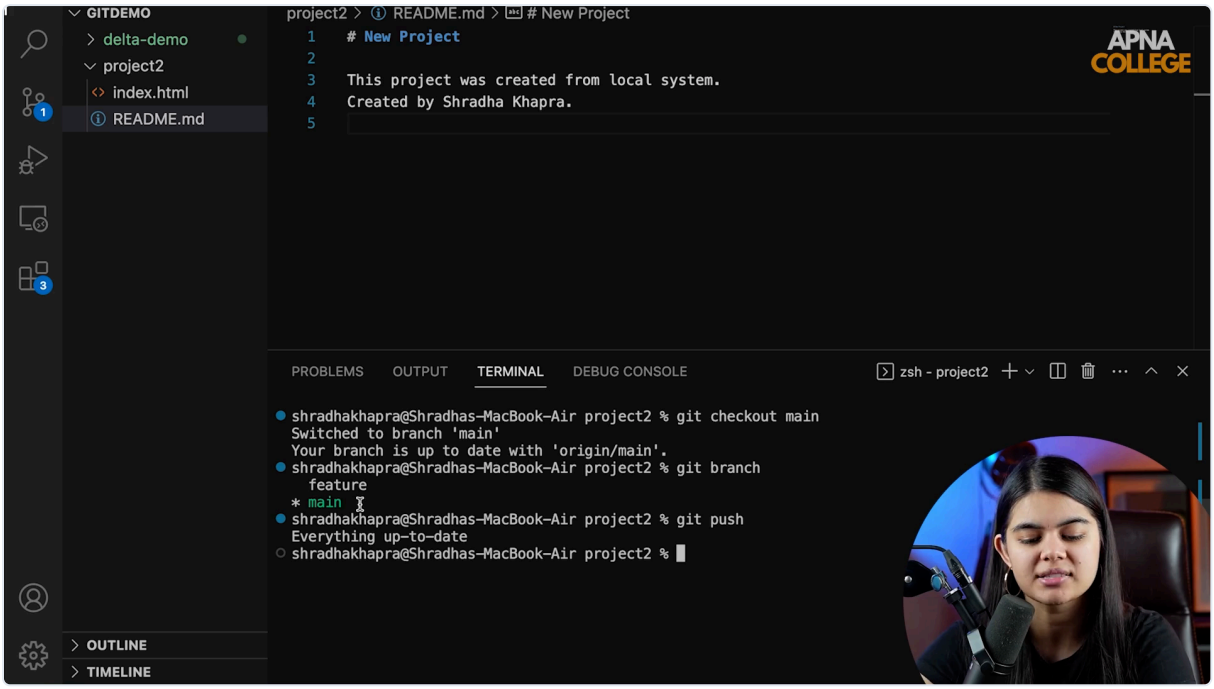

```
git push origin feature-button
```

2. **GitHub par PR Banayein**:
   - GitHub par yellow banner dikhega: **Compare & pull request**. Us par click karein.
   - Likhein ki aapne kya code change kiya hai.
3. **Code Review**:
   - Senior developers aur team members code review karte hain.
4. **Merge**:
   - Green button **Merge pull request** dabate hi code cloud ki main branch mein jud jata hai.
5. **Local Update**:

```
git checkout main
git pull origin main
```

---
