Submodule 34.06: Directory Navigation: `cd`, `..`, Chaining Paths, and Autocomplete (Hinglish)

Topic Overview & Navigation

GUI mein kisi folder ke andar jaane ke liye hum double-click karte hain aur bahar aane ke liye "Back" button dabate hain. Terminal ke andar yahi kaam **`cd` (Change Directory)** command se kiya jata hai.

---

1. Core Navigation Commands

A. Folder ke Andar Jana: `cd <folder_name>`

Current folder ke andar kisi subfolder mein jaane ke liye:

```
# Desktop folder ke andar jana
cd Desktop

# Delta folder ke andar jana
cd Delta
```

B. Ek Step Bahar Aana (Back Button): `cd ..`

Terminal mein double dot `..` ka matlab hota hai **parent directory** (ek step piche):

```
# Ek folder piche aana
cd ..
```

C. Ek Sath Multiple Levels Navigate Karna (Chaining)

Aap slash (`/`) use karke ek hi command mein multiple levels andar ya bahar ja sakte hain:

```
# Ek sath do levels andar jana
cd Desktop/Delta/CSS

# Ek sath do levels bahar aana
cd ../..
```

---

2. Tab Autocomplete Feature (Developer Superpower)

Developers kabhi pura folder name type nahi karte:

- Folder ke pehle 2–3 letters type karein aur **Tab** key dabayein.
- Terminal automatically pura naam complete kar dega.
- Agar same letter se do folders start ho rahe hain, toh do baar Tab dabane se saare options screen par dikh jayenge.

---

3. Error: `No such file or directory`

Agar aap kisi aise folder ka naam likhenge jo wahan exist nahi karta:

```
cd random_folder
# bash: cd: random_folder: No such file or directory
```

Pehle `ls` run karke exact spelling check karein, phir `cd` karein.
