Submodule 34.07: Path Resolution: Absolute Paths vs Relative Paths (Hinglish)

Topic Overview & Filesystem Tree

Terminal mein navigation (`cd`) ya file operations karte waqt system ko path specify karna hota hai. Filesystem ke andar do tarike ke paths hote hain:

1. **Absolute Path**: Root se start hone wala pura complete address.
2. **Relative Path**: Aap abhi jis folder mein khade hain (`pwd`), wahan se target tak ka rasta.

---

1. Absolute Path vs Relative Path ka Comparison

Feature	Absolute Path	Relative Path
Starting Point	System ke sabse top **Root (`/`)** se start hota hai.	Current folder (`pwd`) se start hota hai.
Pehla Character	Hamesha slash `/` se shuru hota hai.	Folder ke naam, `.` ya `..` se shuru hota hai (no leading slash).
Location Dependency	Aap computer ke kisi bhi folder mein khade hon, yeh hamesha kaam karega.	Yeh tabhi kaam karega jab aap sahi parent folder mein hon.
Example	`/Users/Shraddha/Desktop/Delta`	`Desktop/Delta` (agar abhi aap `~` mein hain)

---

2. Special Symbols jo Yaad Rakhne Hain

A. Root Directory (`/`)

Computer ka sabse main pehla folder jiske andar baki saare users, applications aur files hoti hain:

```
# Root directory mein jana
cd /
pwd # Output: /
```

B. Home Directory (`~` Tilde)

Aapka personal user profile folder jahan Desktop, Downloads aur Documents hote hain:

```
# Kahin se bhi direct home folder mein jump karna
cd ~
pwd # Output: /Users/Shraddha (Mac) ya /c/Users/Shivam (Git Bash)
```

C. Single Dot (`.`) aur Double Dot (`..`)

- `.` : Current folder (jisme abhi aap khade hain).
- `..` : Parent folder (ek step upar ka folder).

---

3. Practical Example

Maan lijiye aap abhi `CSS` folder ke andar khade hain aur aapko `Delta` mein jana hai:

- **Relative Path**: `cd ..` (sirf ek step piche).
- **Absolute Path**: `cd /Users/Shraddha/Desktop/Delta` (pura root se address). Dono commands same jagah pahunchayengi, lekin absolute path aap kisi bhi folder se chalayein, hamesha kaam karega!
