Submodule 34.09: Mastering Command Flags: Manual Pages (`man`), `ls -l`, and `ls -a` (Hinglish)

Topic Overview & What are Flags?

Terminal mein **Flags** (ya **options**) woh extra characters hote hain jo hum kisi command ke baad hyphen (`-`) lagakar pass karte hain. Flags kisi bhi command ke default behavior ko modify ya enhance karte hain.

---

1. `man` Command (Official System Manual)

Terminal ke andar har command ki complete guide ("janampatri") pre-installed hoti hai jise `man` **(manual)** command se padha ja sakta hai:

```
man ls
```

- `man` page open hone par scroll karne ke liye Arrow keys use karein.
- **Manual se Bahar Nikalne ke liye**: Keyboard par `q` (quit) press karein. Koi aur key dabane se exit nahi hoga, sirf `q` se exit hoga.

---

2. `ls` Command ke Core Flags

A. Long Listing Format (`ls -l`)

Normal `ls` sirf naam dikhata hai. `ls -l` likhne se har file ki complete details table format mein aati hain:

```
ls -l
```

Output ka Meaning:

Permissions	Owner	Group	File Size	Timestamp	File Name
-rw-r--r--	Shraddha	staff	2048 B	Aug 31 15:10	README.m

- Shuru ka pehla letter: `d` ka matlab directory (folder), `-` ka matlab regular file.
- `rwx` : Read, write, execute permissions.
- File ka size bytes mein aur last modified date/time.

B. Hidden Files Dikhana (`ls -a`)

Unix systems mein jin files ke naam ke aage dot (`.`) laga hota hai, woh hidden hoti hain (jaise `.gitignore` , `.bashrc` , `.env`). Normal `ls` in files ko hide kar deta hai. Saari hidden files dekhne ke liye `-a` (all) flag use karte hain:

```
ls -a
```

C. Flags ko Combine Karna (`ls -la` ya `ls -al`)

Aap do ya teen flags ko ek sath combine karke chala sakte hain:

```
ls -la
```

Yeh long-listing format mein saari hidden aur normal files ek sath screen par render karega.
